

Rowan Torbitzky-Lane

rowan.a.tl@protonmail.com • rowantl.github.io • github.com/RowanTL • linkedin.com/in/RowanTL

Education

B.S. Computer Science - Minor in Applied Mathematics - GPA: 3.80 Missouri University of Science and Technology December 2024
B.S. Mathematics - GPA: 4.00 Lindenwood University May 2027

Purpose

To work at Revel as a Software Engineer - Test. Test-driven Python developer authoring automated tests since 2021, self-taught NixOS and Rust programmer. Drawn to Revel's focus on surfacing blind spots early, while they are still cheap to fix.

Skills

- | | | |
|----------|---------|--------|
| • Python | • CI/CD | • CUDA |
| • Rust | • SQL | • Git |
| • Docker | • Linux | • Nix |

Experience

Computer Vision Intern - USC Institute for Creative Technologies May 2026 - August 2026

- Accelerate mesh/splat correspondence calculation to under one second via C# to Rust FFI
- Train Gaussian Splats on bounded and unbounded scenes
- Extract single objects from Gaussian Splats
- Utilize Nix for programming environment setup

NSF Research Assistant - Missouri University of Science and Technology May 2024 - October 2024

- Train novel, bi-directional LLMs on Genome Sequences to correct errors in genome reads
- Clean and analyze textual data with Scikit-learn and Scikit-bio
- Incorporate huggingface library for model testing

Research Assistant - Center for Intelligent Infrastructure May 2023 - October 2023

- Calculate optical flow with MATLAB and C++ on campus HPC via Slurm
- Coordinate Web Requests with Django to interact with internal PostgreSQL server
- Improve frontend with Typescript, such as adding video upload capability
- Extract image features with OpenCV, using optical flow to predict annotations in subsequent video frames
- Perform Annotations for image segmentation Convolutional Neural Networks

Data Science Co-Op - Hunter Engineering Company January 2022 - August 2022

- Utilize YOLO and PyTorch in license plate recognition problems
- Pioneer object detection models to eradicate bad data before annotators see it
- Innovate data pipeline by automating our data downloading process
- Design and containerize Python APIs with FastAPI and Flask within Docker, started to create endpoints within Azure
- Leverage Pandas and Microsoft SQL in data processing pipelines
- Enforce consistent code style with automated formatting checks in internal Azure DevOps pipeline

Introduction to CS Grader - Missouri University of Science and Technology January 2021 - May 2021

- Author automated Python test cases validating student submissions against assignment specifications
- Translate test failures into actionable feedback for students new to programming

Personal Projects

Self-Hosted NixOS Server - SQL, YOLO, Docker, Firewall, Git, Nginx, CUDA January 2023 - Present

- Automate flake updates daily via CI/CD pipeline on GitLab
- Train bird object detection Convolutional Neural Networks
- Host game servers via Docker

Rust Genetic Programming Framework - Polars, rust_decimal March 2025 - Present

- Perform pre-processing on Time Series Data
- Practice test-driven development philosophy involving writing unit tests
- Write declarative and procedural macros for reduced boilerplate
- Utilize rust_decimal's fixed-point precision to avoid floating-point errors

Talks & Events

Talk: Genetic Programming in Python @ PySTL https://www.youtube.com/watch?v=ZzYi_j2lYyY September 18th, 2025

Talk: Actix Web Framework @ STL Rust <https://rumble.com/v72mid6-actix-web-unleashed.html> December 4th, 2025

Hackathon: SIGGRAPH 2026 Worlds in Action Hack @ MG Studio <https://luma.com/u7pmhw92> July 18th, 2026
